ELSEVIER

Journal of Luminescence 94–95 (2001) 831–834

JOURNAL OF LUMINESCENCE

www.elsevier.com/locate/jlumin

Subject Index

1.5 μm wavelength 565

4f binding energies 1
4f5d transitions 79
4f–5d → $4f^2$ emission 69

Absorption and emission spectra 97
Absorption and luminescence spectra 239
Activation spectroscopy 475
Anderson localization 359
Anharmonicity 743
Anti-Stokes luminescence 143
Auger process 667
Avalanche 289

Biexciton 373, 379
Birefringent crystals 177
Black spots 461
Blue shift 389
Bose–Einstein statistics 379
Bound excitons 261

Carrier-induced ferromagnetism 523
CARS 605
Cavity quantum electrodynamics 797
CD 267
Charge carriers 475
Charge-density-wave 513
Charge transfer 11, 677, 743
Charge-transfer complexes 483
Charge transfer vibronic exciton 775
Charged impurity 775
Chiral discrimination 283
Cluster optical centers 123
Coherence 815
Coherent emission 663
Coherent LO-phonon–plasmon coupled mode 631
Coherent magnetic oscillation 597
Coherent phonons 631, 673, 751
Coherent potential approximation 523
Coherent quadrupole–quadrupole ion–ion interaction 123
Coherent transients 565, 725
Color centers 299, 811
Composite materials 503
Computer simulation 349
Confocal microscopy 147
Cooperative emission 29
Cooperative quenching 349
Coulomb screening 555
CPL 283
Critical micelle concentration 239
Critical relaxation phenomena 545
Cross-ionization 7
CT crystals 441
CuI thin films 385
Cuprates 163
Cyclotetraphoshates 69

Decay time 261
Degenerate four-wave-mixing 433, 725
Dendrimers 203, 569
Density matrix theory 447, 471
Dephasing 133
Dephasing time 575
Diffusion 407
Diluted magnetic semiconductors 523
Dipole wave 507
Directed transport 137
Disordered solids 359
Divalent lanthanides 127
Donor 417
Double fluorides 343
Double-pulse excitation 631
Double quantum wells 507
Double-well potentials 683
Dye–micelle interaction 239
Dynamical property 541
Dynamic splitting 123

Effective medium 163
Elastic constants 755
Electron acceptors 649
Electron-hole plasma 407
Electron spin resonance 529
Electron transfer 471
Electronic relaxation 475
Electron–electron interactions 533
Electron–lattice interaction 513
Electron–phonon coupling 617, 701, 719

Electron–phonon interaction 691, 781
Emission 127
Emission lifetimes 397
Energy funneling 317, 569
Energy transfer 7, 243, 311, 325, 349
Energy transport 203
Exchange interaction 331
Excitation spectra 393
Excitation spectroscopy 465
Excited state absorption 427
Excited state processes 181
Excited states 617
Exciton coupling 267
Exciton delocalization length 451
Exciton diffusion 461
Exciton dissociation 461
Exciton interaction 507
Exciton–light interaction 173
Exciton transfer 447
Exciton transport 271, 369
Excitonic strings 441
Excitons 153, 169, 173, 203, 255, 355, 385, 403, 413
Extended three-body force shell model 713

FDTD 35
Femtosecond 653
Femtosecond proton transfer 623
Femtosecond pulse laser 617, 627
Femtosecond spectroscopy 489
Femtosecond time-resolved study 483
Fluorescence 447
Fluorescence line narrowing 221, 275
Fluorescence quantum efficiency 641
Fluorescence upconversion 623
Fluoride crystals 45
Fluorite structured crystals 791
Free-electron laser 243
Free electron laser 707, 725, 729
Free exciton 235
Frenkel exciton 369, 451
Frenkel excitons 271, 359
Frog 645
Fullerene 649

Glass 275, 279
Glass ceramics 217
Glasses 221, 229, 325, 695

Heavy hole 385
Heterojunction 417
High density effect 389
High-density excitation 403
High-density excitons 365
High-density excitons masses 433
High-energy ion 407
High-pressure Raman spectroscopy 541
High-pressure spectroscopy 85
Ho^{3+} 289
Hole burning 211, 217, 221, 225, 503, 695
Homogeneous broadening 221, 225

Indirect excitons 355
Infrared 23, 107
Infrared photon echoes 575
Inhomogeneity 163
Inhomogeneous broadening 217
Interface effect 261
Intersubband transitions 249
Intrinsic localized vibrational mode 743
Intrinsic optical bistability 635
Iodine 611
Ion-pair states 611
IR dyes 641

J-aggregate 239, 451, 461, 821

Lanthanides 79
Laser materials 113
Laser spectroscopy 787
Laser stabilization 565, 587
Lasers 55
LD pumping 317
Level statistics 369
Lifetime in a cavity 293
Lifetimes 97, 299, 355
Ligand transport 489
Light hole 385
Liquids 771
Lixiviation 197
Local modes 729
Low temperatures 695
Low-frequency light scattering 687
Low-frequency responses 771
Luminescence kinetics 85

Magnetic field 393, 707
Magnetic transition 545
Magnon 597
Master equation 133
MCD 267
Mechanism 59
Metal complex 91
Microcavity 811
Microring 35
Mid-IR transitions 791
Mixed-valence complex 541
Molecular aggregates 271
Molecular machinery 137
Molecular motors 137
Molecules at surfaces 471
Mott insulator 659
Multi-photon excited states 499
Multi-site structure 775
Multiphonon 737
Multiphonon relaxation 791

Nanoaggregates 169
Nanocrystals 217, 229
Nanomaterial 181
Nano-optical recording 157
Nanoparticles 191, 221, 747
Nanospheres 211
Nanostar 569
Nanotechnology 147
Non-equivalent centers 691
Non-polar solvation 611
Non-radiative decay 707
Non-radiative transitions 85
Nonlinear susceptibility 659
Nonvolatile 73
Nuclear glass 197

Optical absorption 203
Optical conductivity 163
Optical data storage 519
Optical dephasing 211
Optical gain 55
Optical Kerr effect 559
Optical Kerr shutter 593
Optical phonon 761
Optical properties 533
Optical spectra 701
Optical spectroscopy 169
Optical switching 157
Organic microcavities 821
Organic molecular crystals 673
Organic nanostructures 157
Orientationally disordered materials 713, 755
Oxide crystals 19

Pairs 635
Persistent luminescence 59
Persistent spectral-hole burning 15
Phase states 815
Phase transitions 255, 533
Phase-locked pulse pair 645, 663
Phonon avalanches 751
Phonon dispersion curves 713
Phonons 747
Phosphate glasses 321
Phosphorescence materials 19
Photoactive yellow protein 593
Photochromic 73
Photochromism 51, 157, 519
Photoconductivity 7
Photodissociation 493
Photo-induced absorption 15
Photo-induced Faraday rotation 551
Photo-induced phase transition 483, 499, 529, 537, 541
Photo-induced superconductivity 499
Photo-induced absorption spectroscopy 787
Photo-induced structural phase transition 513
Photoionization 465, 519
Photoluminescence 187, 191, 207, 235, 243, 299, 355, 579, 761
Photon avalanche 249
Photon correlation 797
Photon gating 649
Photon statistics 805
Photosystem 267
Plasmons 555
Polariton 173
Polarized transient absorption 441
Polarons 781
Polymer dynamics 437
Polymers 695
Pressure 687
Pressure effect 417
Proton transfer dynamics 623
Pulse excitation 605
Pump–probe 729
Pump–probe spectroscopy 569

Quantum beat 385
Quantum dots 143, 173
Quantum kinetics 555
Quantum wells 249, 551
Quantum wire 389
Quasi-one-dimensional crystal 483
Qubits 815

Rabi splitting 821
Radiative lifetime 217
Radioluminiscence 321
Rare earth 587, 635
Rare earth garnets 1
Rare earth ions 45, 113, 243, 737
Rare earth spectroscopy 229
Rare earths 101, 343, 565
Rare gas matrices 611
Reaction kinetics 51
Real-time spectroscopy 667
Reflection 663
Relaxation 695
Relaxational mode 733
Resonant photoemission 1
Ruby 751

Scanning confocal optical microscopy 805
Scanning molecular exciton microscopy 153
Scanning near-field optical microscopy 153
Scintillation 69
Scintillation processes 321
Self-quenching 293, 343
Self-trapped excitons 255, 421, 653
Self-trapping 293
Semiconductor surface 627
Semiconductors 243, 533
Shallow electron traps 421
Shear modulii 755

Sideband 737
Silica glass 91
Single molecules 133, 177
Single photon emission 797
Single quantum dot 143
Single-molecule spectroscopy 147, 805
Site conversion 775
Site-selective excitation 97
Site-selective spectroscopy 123, 197
Small polarons 15
Small-world networks 437
SNOM 157
Solid-state lasers 317
Sol–gel 35, 275, 279
Sol–gel glass 91
Sol–gel matrices 767
Sol–gel method 503
Sol–gel technique 641
Sol–gel technology 225
Space–charge field 631
Spectral diffusion 601
Spectral hole burning 565, 579, 587, 649, 683, 719
Spectroscopy 65
Spin-crossover complexes 537
Spin relaxation 551
Spontaneous emission 177
Spontaneous emission modification 811
Stark shifts 267
State mixing 119
Stimulated phonon emission 751
Stokes and anti-Stokes scattering 733
Strained quantum wells 761
Stress-induced potential well 413
Stretching and deformation 437
Strong correlation 659
Strong fields 133
Structural change 529
Structural phase transition 537
Superlattice 379
Surface-enhanced Raman effect 147

Tb-complex 283
Temperature dependence 627, 771
Ternary mixed crystal 781
Thermally stimulated luminescence 465
Thin films 169, 811
Three-pulse photon echo 601
THz radiation 627
THz spectroscopy 555
Time-resolved fluorescence 593
Time-resolved photoluminescence 373
Time-resolved photon echoes 601
Time-resolved X-ray scattering 493
TR coupling 755
Transform theory 605
Transient grating spectroscopy 489
Transient IR-absorption 421
Transient spectroscopy 51
Transmitted pulse 645
Trapping effects 11
Triplet exciton 393
Two-dimensional strongly correlated electron systems 499
Two-level systems 221, 649, 683
Two-photon absorption 815
Two photon process 337
Two-photon spectroscopy 413
Type-II quantum wire 389

Ultrafast 597
Ultrafast optics 673
Ultrafast processes 617
Ultrafast spectroscopy 559
Ultrafast switching 249
Ultraviolet spectroscopy 39
Ultraviolet tunable lasers 113
Up-conversion 279, 317
Upconversion 101, 289, 305, 325, 331, 337, 641
Upconverted luminescence 181
UV luminescence 457

Vacuum ulraviolet radiation 45
Van der Waals solids 457, 575
Vibrational echoes 729
Vibronic effect 677
VUV 79

Wave-packet 653
Weak hydrogen bond 575

X-ray excitation 11
